The main function of Auto hub is to bear the weight of vehicle and provide accurate direction for hub transmission. The hub is a very important safety part which will bear the axial load and the radial load.

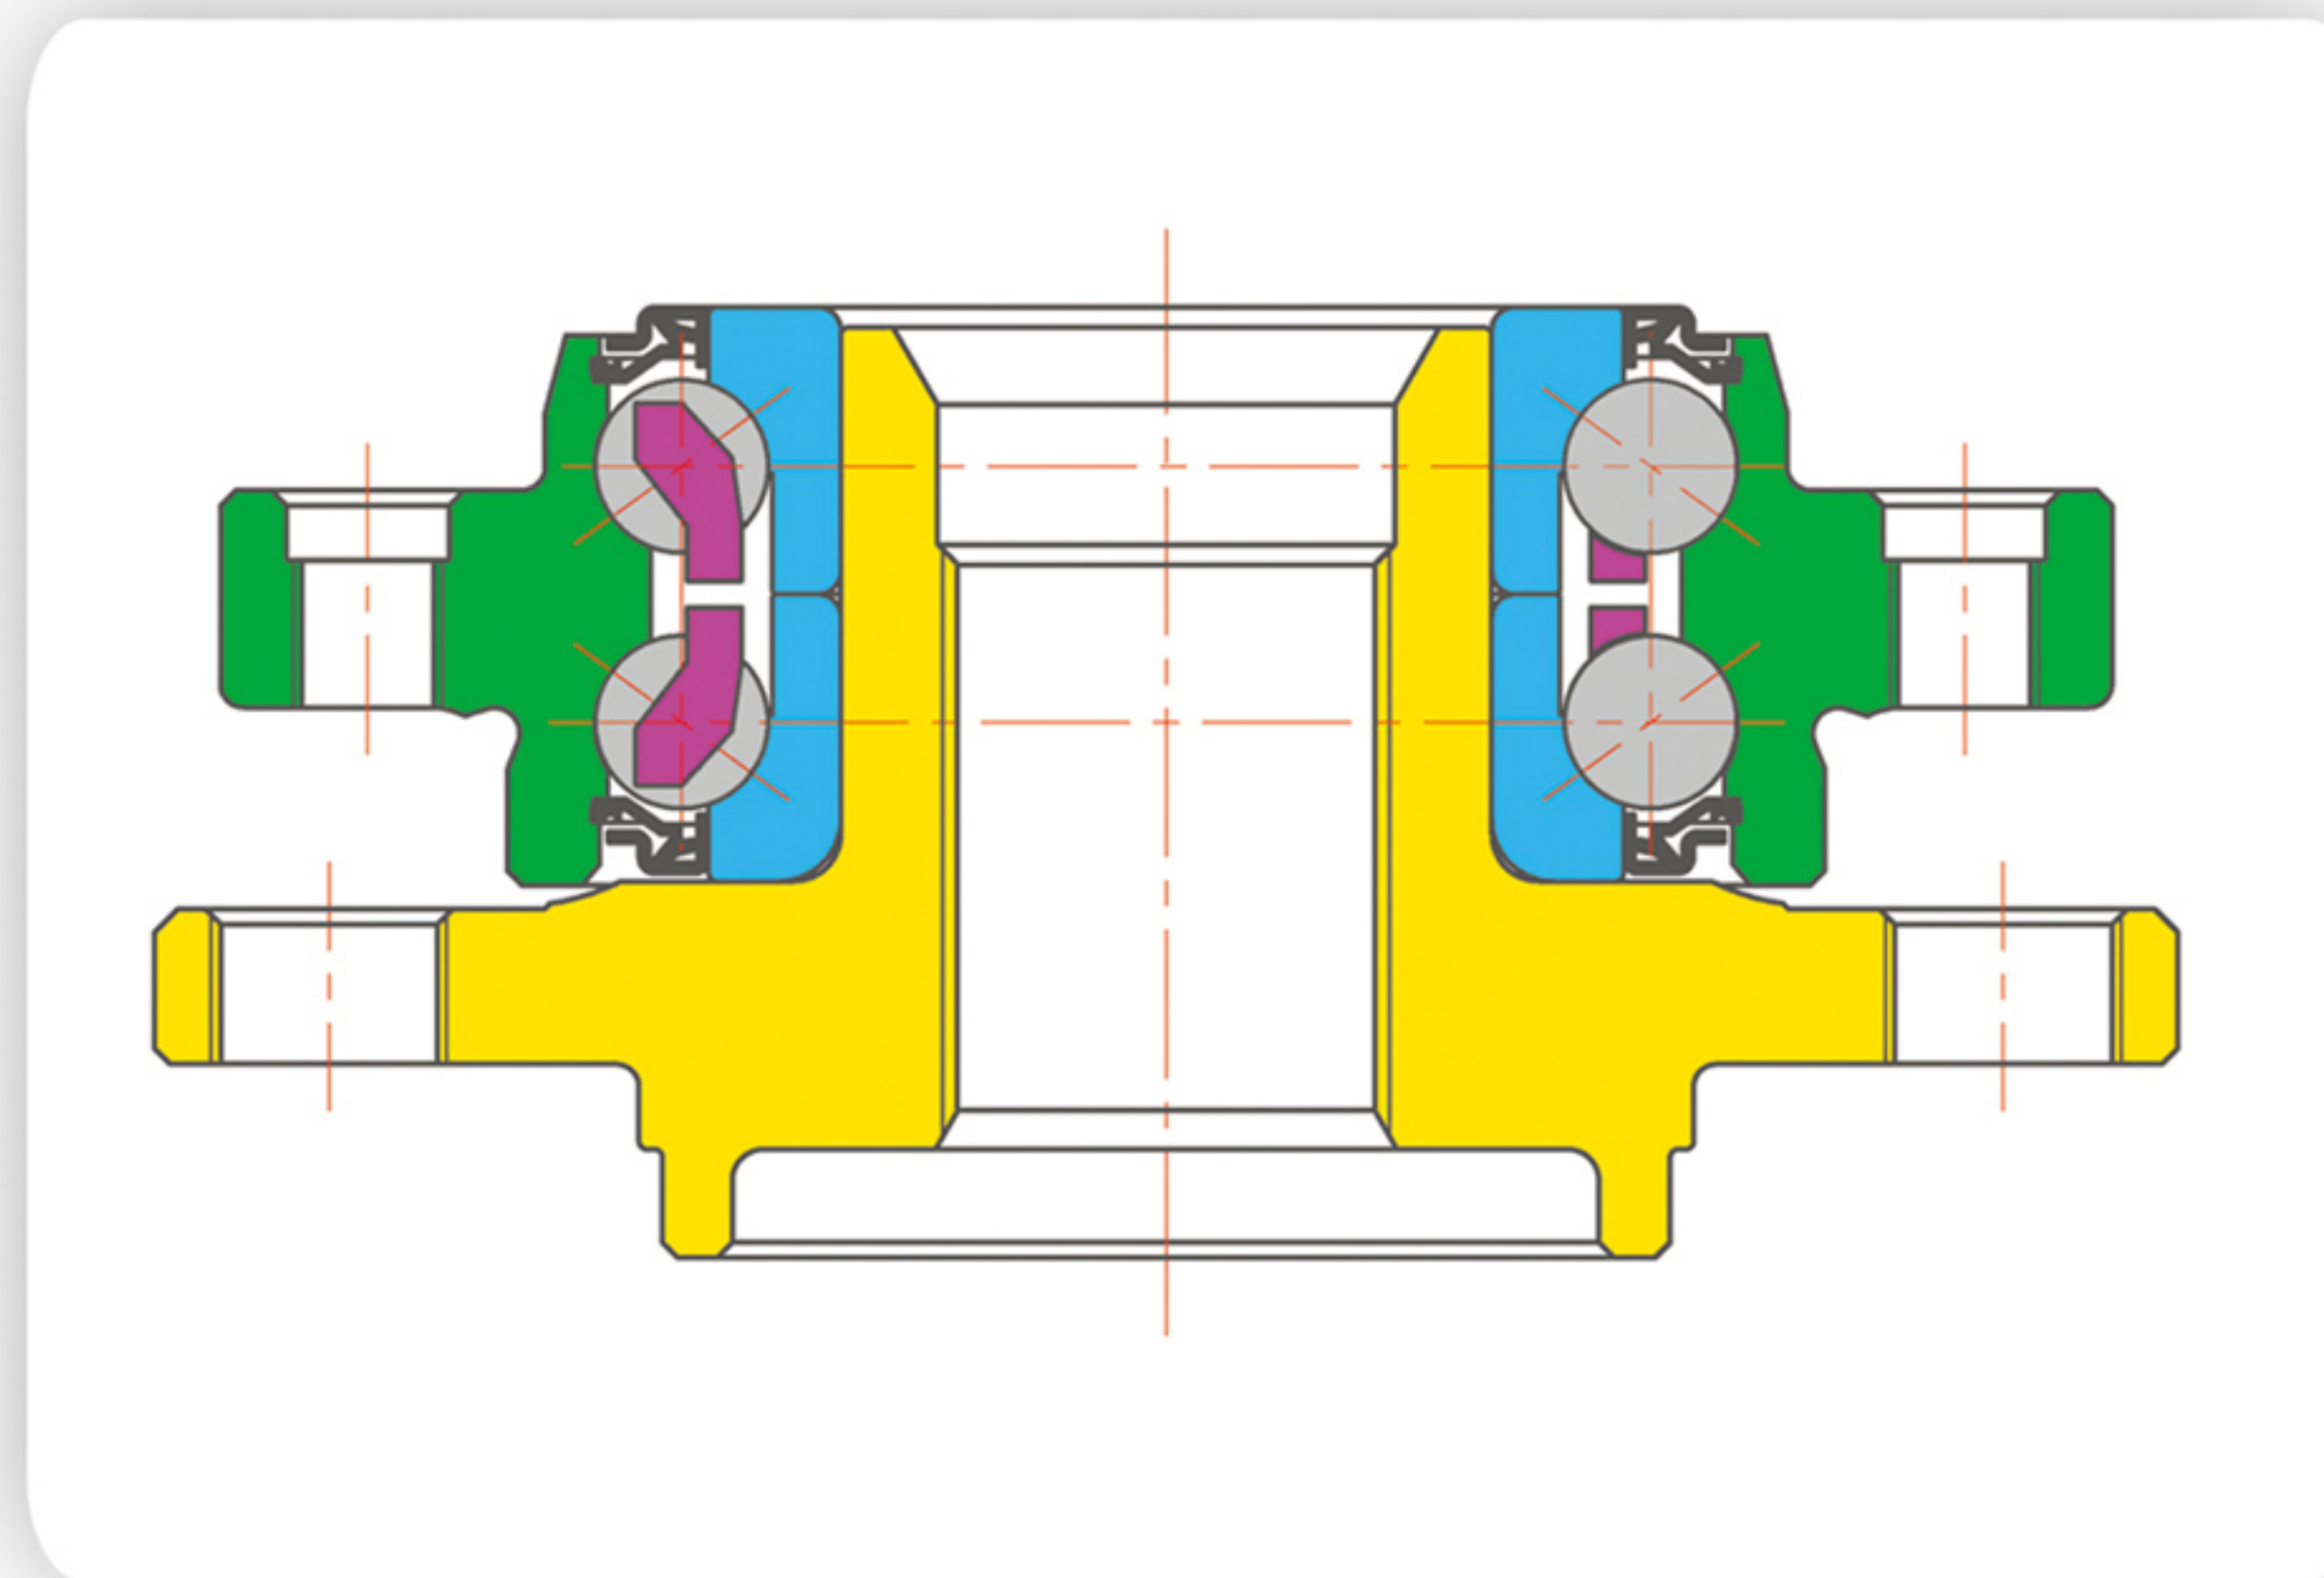

To adapt to the light tendency, to meet the convenience of assemble、disassemble、switch、adjustment and high reliability requirement. The Auto hub gradually become a unit. The hubs which are available and being used are the second generation and the third generation. We also can distinguish the hub to dual row angle contact ball bearing and taper roller bearing by carrying capacity.
