Glow Plugs

Bougies de préchauffage

Glühkerzen

Calentadores

2010~2011

This catalogue contains a comprehensive selection of items we produce. If you are unable to find the right glow plugs you need, please contact us. We are pleased to give you more details and information for your specific interest. Enjoy the HKT's world No.1 comprehensive items and quality.

Ce catalogue comporte une vaste selection des articles que nous traitons. Si vous n'arrivez pas a trouver ici ce que vous cherchez, veuillez nous contacter. Nous serons heureux de vous fournir des catalogues specialises par secteur et tous les renseignements pouvant vous interesser.

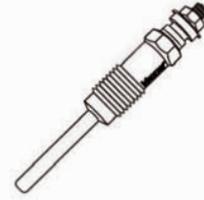

Este catálogo contiene una amplia información de los artículos que fabricamos. Si en esta publicación no encuentran sus necesidades, por favor contacte con nosotros y les facilitaremos con más detalles, informaciones que puedan ser de gran interés mutuo.

THE FEATURES / AVANTAGES

GLOW PLUG

OEM QUALITY

We are one of the most major glow plug manufacturers in Japan with super modern production facilities and well advanced technology; Our quality is strictly compiled to the JIS, ISO & OEM specifications;

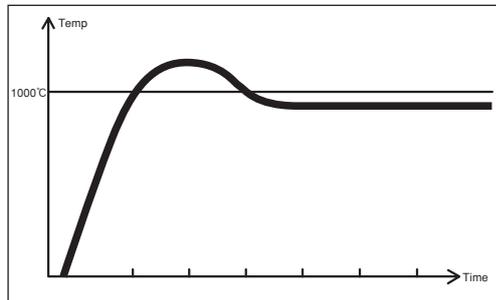

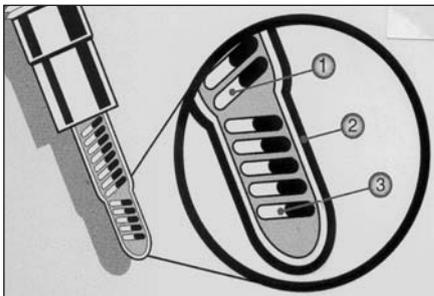

SUPER DUAL COILS

Our advanced dual coil system to ensure a self-control of temperature withstanding a sudden rise of voltage, and even a long period of after glow;

OVERSHOOTING

Quick rise of temperature and powerful breaking effect afterwards, This good combination of characteristics we can offer.

COMPACT RANGE

HKT's compact " MULTIPLUS PROGRAM " offers you a big sales profit by reducing your current inventory. The majority of vehicle applications can be covered by only 6 HKT's reference part numbers. (Approx. market coverage : 90 %)

NEW ITEM

HKT's newest glow plug for the latest model of vehicles. Quick research and speedy development are one of our strategy.

PLUS, Top application to Japanese Vehicles

Failure Analysis Guid

	Cause	Remedy
<p>Probe surface melting</p> 	<p>Premature start of the injection cycle. Injector-nozzles with coke deposits, or well, injector-nozzles wear. Engine damage (after break of valves, piston seizure...). The injector-nozzles drip. Piston rings are seized. Piston rings that allow oil flow to the combustion chamber.</p> <p>The end of heating element is too hot and melts or breaks.</p>	<p>Check the injection system and set the injection point correctly.</p>
<p>Cut off or blown Probe</p> 	<p>Oil flows to the combustion chamber. Defective calibrating or premature injection cycle.</p> <p>The end of heating element is too hot. Possible break or melting.</p>	<p>Check oil consumption. Check engine piston sealing (piston rings...). Check the control unit. Check the injection system. Set correctly the injection cycle.</p>
<p>Probe surface melting and breaking of heating coil</p> 	<p>Operation with excessively high voltage (e.g. in starting assistance). The voltage is applied during long time (failure of pre-heating relay). The post-heating glow is not admissible with engine running. Glow plug with no post-heating has been fitted. Increased alternator voltage.</p> <p>Break of the heating wire (heating filament).</p>	<p>In starting assistance use 12V vehicle electrical system only. Check the pre-heating glow plug system. Replace the pre-heating relay time. Check alternator.</p>
<p>Swollen Tip</p> 	<p>Defective glow plugs. The tube may swell, burst or even explode due to the incorrect filling or poor drying of insulating powder before filling.</p> <p>Short-circuit caused by the overheating. The incandescence tube may burst or explode.</p>	<p>Only use the type of glow plugs recommended by the engine manufacturer.</p>
<p>Plug body showing carbon</p> 	<p>Defective injection system. Incorrect measurement. Premature start of the injection cycle.</p> <p>The tip end of the heating element is too hot. Becomes brittle and breaks.</p>	<p>Check the injection system. Set the injection point exactly.</p>
<p>Carbon deposit filling gap at base of probe</p> 	<p>Excess fuel or oil getting past the valve stem or piston rings.</p> <p>Poor Quality of fuel used.</p>	<p>Replace and repair where necessary. Check the quality of fuel.</p>
<p>Plug showing ridge on probe</p> 	<p>Excess fuel or oil entering the combustion area.</p>	<p>Check injection system and timing.</p>
<p>Plug terminal snapped</p> 	<p>Excessive terminal-nut and/or connector tightening torque. Due to the use of incorrect tools.</p> <p>Terminal stud shears off, damage to hexagon nut, short circuit.</p>	<p>Use the appropriate torque wrench. Comply exactly with specified tightening torque.</p>

	CAUSA	SOLUCIÓN
<p>Superficie del tubo derretida.</p> 	<p>Comienzo del ciclo de inyección demasiado pronto. Inyectores con depósitos de hollín o desgastados. Daños en el motor tras la rotura de válvulas, gripado de pistones... Los inyectores gotean. Segmentos agarrotados. Los segmentos dejan pasar aceite a la cámara de combustión.</p> <p>El extremo del tubo de incandescencia se calienta excesivamente. Se rompe o se funde.</p>	<p>Comprobar el sistema de inyección y ajustar correctamente el ciclo de inyección.</p>
<p>Tubo "degollado" o explotado</p> 	<p>* Problema de inyección que origina un chorro de combustible esparcido anormalment sobre el tubo.</p>	<p>* Limpie, reemplace o repare los inyectores.</p>
<p>Superficie del tubo derretida y corte de la bobina calentadora.</p> 	<p>Tensión demasiado alta (p.ej. en arranque asistido). Se aplica corriente durante demasiado tiempo (fallo relé pre-calentamiento). El post-calentamiento no es admisible con el motor en marcha. Se ha montado un calentador no apto para post-calentamiento. Elevada tensión del alternador.</p> <p>Rotura del filamento (espiral de calentamiento).</p>	<p>En ayuda para el arranque utilizar solamente sistema de 12V. Comprobar el sistema de pre-calentamiento. Sustituir el relé de pre-calentamiento. Comprobar alternador.</p>
<p>Punta hinchada.</p> 	<p>Calentadores defectuosos. Debido a un llenado deficiente o a un secado incorrecto del polvo aislante antes del llenado, el tubo puede hincharse, reventar e incluso explotar.</p> <p>Cortocircuito debido a sobrecalentamiento. El tubo de incandescencia puede reventar o explotar.</p>	<p>Utilizar solamente el tipo de calentadores recomendados por el fabricante del motor.</p>
<p>En el cuerpo de la bujía aparece carbón.</p> 	<p>Defecto del sistema de inyección. Tarado incorrecto. Comienzo del ciclo de inyección demasiado pronto. La punta del tubo de incandescencia se calienta excesivamente. Se vuelve quebradiza y se rompe.</p>	<p>Comprobar el sistema de inyección. Ajustar correctamente el ciclo de inyección.</p>
<p>Carbon deposit filling gap at base of probe</p> 	<p>* Exceso de combustible o aceite que pasa por el vástago de las válvulas o por los aros.</p> <p>* Mala calidad del combustible usado.</p>	<p>* Reemplace y repare lo que sea necesario. * Revise la calidad del combustible.</p>
<p>Ondulaciones en el tubo.</p> 	<p>* Exceso de combustible o aceite que entra en la cámara de combustión.</p>	<p>* Revise el sistema de encendido y la puesta a punto.</p>
<p>Terminal de la bujía suelto.</p> 	<p>Apriete excesivo de la tuerca y/o conector. Utilización de herramientas inadecuadas.</p> <p>Rotura del perno de conexión. Tuerca hexagonal dañada, cortocircuito.</p>	<p>Utilizar llave dinamométrica adecuada. Respetar el par de apriete especificado.</p>
